

Brand of NTN corporation

New universal boot kit range

The universal boot kit range covers more than 50% of the vehicles on the Europe car park today. It is an alternative to the standard part

Specific characteristics

- Boots are made of nitrile rubber which is more flexible than the standard material used in some products.
- Adaptable collars for ready-to-install kits, that cover many applications.
- The universal boot kit range covers more than 100 different vehicle brands.

Vehicles covered

All types of domestic and light commercial vehicles

Main brands covered

Alfa Romeo, Audi, BMW, Chevrolet, Citroën, Dacia, Daewoo, Daf, DS, Fiat, Ford, Honda, Hyundai, Isuzu, Iveco, Jeep, Kia, Lada, Land Rover, Man, Mazda, Mercedes, Mitsubishi, Nissan, Opel, Peugeot, Renault, Renault Trucks, Seat, Skoda, Smart, Subaru, Suzuki, Toyota, Volvo, Volkswagen...

Technical characteristics

Boot material: Nitrile, natural rubber compound; flexible, high-performance material allows for an easy installation. The boot's flexibility enables it to cover a range of diameters, allowing the boot to cover many different applications.

Specific component characteristics: Flexible and versatile boots, large and small adjustable collars, universal grease
