Bearings for Mining Application
NTN Mining Application

There is a wide range of heavy duty machinery used in mining industries. They need high reliability for continuous operation. NTN can support them with high quality, heavy duty rolling bearings, plain bearings, constant velocity joints and plummer blocks. Please take a look at the variety of NTN products.
Features

The material NTN developed for LH series spherical roller bearings has gained considerable acceptance in the market. As a next step, NTN will launch the new series with a symmetrical roller design with LH material as a standard. For bearings with an OD over 420mm, both asymmetrical and symmetrical roller design are available.

Application Example

- High reliability: The benefit of longer life
- Reduced maintenance: The benefit of longer life
- Longer Life (Over 3.5 times)
- Higher Capacity (1.4 times)
- High Temperature (250°C)
- Compact design: The benefit of higher capacity
- Spares inventory reduction: Special heat stabilization is not needed

Bearings for swing machinery
Features

This design provides a bearing uniquely qualified for heavy, shock or vibratory type of radial loading.

Application Example

The type UA spherical roller bearing, with high dynamic capacity, is recommended for applications having heavy or shock type of radial loading such as vibrating screens and heavy load applications such as reduction gear units.
Features

1. Longer life (1.5 times longer life than standard type)
2. Higher load rating than standard series via larger size rollers

CYLINDRICAL ROLLER BEARINGS SL Type

Features

SL type cylindrical roller bearings are double row, full complement cylindrical roller bearings, and are suitable for heavy duty application because of the high basic load ratings. Floating and locating SL bearings are available and both non-separable. Locating SL bearings can support radial load and axial loads in both directions. SL-04 type, which have snap rings on OD and seals or shields, mainly used in rope sheave applications. Thus easy handling and simple design are obtained by using SL-04 type.

Application Example

- General purpose sheave on land
- Greasing is from the shaft
- General purpose sheave on land for better sealing performance
- Crane sheave on the sea
- Deck crane

SL04-50NR type
- Shaft: g6
- Housing: M7 or N7

Sheave
A newly developed special heat treatment allows these bearings to ensure longer operating life under severe operating conditions!!

Features

EA bearings have a particularly strong advantage by providing longer operating life due to their improved crack fatigue strength, wear strength and peeling resistance characteristics, especially when the lubricant is contaminated, but also under clean lubricant conditions. Accordingly, these bearings can be used in mining and ore processing applications where marginal lubrication, vibrations and impact loads often exist. The EA bearings provide advantages due to their compact design, longer operating life, and longer intervals between maintenance and inspections. EA material treatment can be offered in tapered roller, cylindrical roller and spherical roller bearings.

Application Example

Compound layer of carburized and nitrided materials
Carburized layer
Core

Front wheel of dump truck
LARGE SIZE DOUBLE ROW TAPERED ROLLER BEARINGS

Back to back arrangement and face to face arrangement are both available, and they have been adjusted so that each type’s internal clearance is fixed. Pairs of duplex single row tapered roller bearings are also manufactured. For more details, contact NTN Engineering.

Face to face arrangement types are used for reducers and tyre rollers in vertical mills. Especially bearings for tire rollers are designed to endure heavy loads and shock loads. Pin type cages are sometimes selected for maximum capacity. For heavy load and bi-rotational applications, NTN utilize pinned cages with pin seating bush for increased cage strength. This cage design has gained strong acceptance by equipment operators.

Features

Application Example

The tyre roller of vertical mill
SPHERICAL PLAIN BEARINGS

Features

Self-lubricating type spherical plain bearings
Self-lubricating spherical plain bearings are primarily intended for situations where a long life, free from maintenance and lubrication requirements, is desired. They are also used for applications where lubrication is difficult.

Lubrication type spherical plain bearings
Lubrication type spherical plain bearings feature sliding surfaces where both the inner and outer rings are steel. Fractured outer ring type and fitting groove type are available.

Application Example

Excavator

Wheel Loader (articulate type)
Features

The high load capacity of spherical roller bearings and their ease adaptability to a variety of applications has led to increased use in nearly every industry. Compact sealed spherical roller bearings have been developed by NTN specifically to address the need for longer operating life such as longer maintenance or relubrication.

Exellent sealing performance against dusts, and slurry
Can be installed in the standard series plummer blocks
Re-grease without removal of seals
Uniform sealing capability under misaligned operating conditions

Application Example

Direction of movement
Head pulley (drive pulley)
Tension pulley
Tail pulley

Sealed spherical roller bearing
Cross section of plummer block unit

SEALED SPHERICAL ROLLER BEARINGS  WA type
PLUMMER BLOCKS

Features

Tightening bolt
The bolt protects the plummer block against loosening due to vibration and impact.

Oil fill plug
For relubrication.

Oil drain plug
For draining old lubricant.

Adapter
Simplifies installation of the bearing.

Seal
Excellent sealing performance.

Dowel ball
The upper and lower housings can be assembled together at higher accuracy by ball-dowel system using steel ball. Also, the upper cover can be installed or removed easily.

Spherical roller bearing
Self-aligning ball or spherical roller bearing is built into plummer block.

Mounting bolt holes
Allow easy positioning and installation.

Application Example

Trunnion bearing of ball tube mill

Supporting roller of tube mill
Features

“Solid grease” is a lubricant essentially composed of lubricating grease and ultra high-molecular-weight polyethylene. Solid grease has the same viscosity as ordinary grease at normal temperature, but as a result of a special heat treatment process, this grease solidifies retaining a large proportion of the lubricant in it. By this solidification, the grease does not easily leak from the bearing, even when the bearing is subjected to strong vibrations or centrifugal force.

1. Reduced lubricant leakage
Because the base oil is retained in a solid form, it is less likely to leak out of the bearing. During operation, temperature rise and/or centrifugal force will cause a gradual release of the base oil into the rolling surfaces. Eliminating grease leakage from the bearing ensures a consistent supply of lubricant and prevents contamination of the surrounding environment.

2. Superior lubrication
Bearings with solid grease resist grease leakage prolonging bearing life in applications where high centrifugal force or vibration are present. The solid lubricant does not emulsify when exposed to water also extending both grease and bearing life.

3. Sealing effect
Though solid grease protects a bearing against ingress of foreign matters (water, dust, etc.), it is not an effective sealing device. Therefore, for applications that need reliable sealing performance, we recommend the use of contact type rubber seals (deep groove ball bearings, bearing units) or other seals (other bearing types).
TRIPLE LIP SEALED BEARINGS for BEARING UNIT

**Features**

- **Triple lip seal**: For easy mounting of the bearing on the shaft, tightens securely and does not loosen.
- **Balled setscrew**: Provides excellent dustproofing and waterproofing, thus protecting against contamination by dust or foul water.

**Sealing device**

The rubber seal extends to the outer circumference of the shielded plate for better sealing performance, and prevents contamination of the bearing by dust or foul water.

**Sealed plate**

Galvanized steel plate construction ensures improved corrosion resistance. Optimal design contributes to enhanced pressure resistance.

**Application Example**

Triple lip sealed bearing units are suitable for equipment used in locations subjected to splashing foul water and slurry, and heavy dust contamination, including mining conveyors, mixers, pumps and samplers.

A pillow unit (right) and a square flange unit (left) are used in a conveyor unit operating in an environment with heavy airborne dust.
NEEDLE ROLLER BEARINGS

**PK Series needle roller and cage assemblies**

Features

PK Series needle roller and cage assemblies are widely used in construction machinery, agricultural machinery and hydraulic equipment. Often, numerous needle roller bearings are used in the planetary gear speed-reduction mechanism for mining and construction machinery.

Application Example

Transmission

**Super high-capacity needle roller and pressed cage assemblies**

Features

In recent years, customers have required for bearings that have ever-increasing capacity. In response, NTN created a super high-capacity needle roller and pressed cage assemblies as the HWTJ Type. Compared to the standard design, the number of rollers is increased by 20 to 30% and basic load rating by 20 to 35%. This bearing series satisfies the requirements of large basic load rating, long life under severe operating conditions and high rigidity.

Planetary speed reducer

**PKJ Series needle roller and pressed cage assemblies**

Features

PKJ Series needle roller and pressed cage assemblies were developed to deal with requirements of reduced cost coupled with high durability for tough applications. It features an outside diameter guided cage, with the same plate thickness and high rigidity as PK series.
Features

Bearings used in electrical equipment such as DC and AC variable speed motors, generators etc. can exhibit electrical pitting resulting from current leakage. NTN’s MEGAOHM™ Series of insulated bearings has been specifically designed to counteract electrical pitting. These bearings are available in both ceramic and resin types suited to a variety of applications. The MEGAOHM™ Series of insulated bearings offers the following unique advantages:

- Exhibits insulation resistance of at least 100 MΩ at 500 VDC.
- Available in a wide range of variants with various insulating layer materials, high voltage resistance and shock immunity that accommodate diverse user requirements.
- Compatible with ISO 492, DIN 620 and JIS 1514 standards.
- Available in bore diameters ranging from 50 to 160 mm.

Application

Insulated Bearings for Generator
The constant velocity joints are generally designed for drive axle. Maximum allowable alignment angle is 42°. They have a long re-lubrication interval, high reliability for long life, high efficiency and smooth rotation & low noise. Available part numbers are BJ125 – BJ300.

Features

- Dump trucks
- Wheel loaders
- Shuttle cars
- All terrain trucks and cranes
- Vibrating screens
- Crushers
- PTO for engine -auxiliary equipment or propeller shaft

Application Example
