## FRONT SUSPENSION

### SUSPENSION BEARINGS

Leader in the OEM market, SNR makes all of its experience in developing OEM solutions for suspension systems available to the aftermarket and guarantees you approved "original quality" products (bearings and components)

Suspension bearings operate in a very demanding and exposed environment. This is why all SNR Suspension thrust bearings are :

- Designed, studied and optimised with respect to rigidity and sealing
- Validated for each vehicle application
- Tested, on SNR test beds and on manufacturers test vehicles

### SUSPENSION KITS

SNR includes all suspension parts in their kits (bearing, screws, bolts, insulating parts).

- **Strut Insulator**
- **Suspension Bearing**
- **Fixing components**

## REAR SUSPENSION

### RADIUS ARM SUSPENSION KITS

Radius arm suspension Kits for the aftermarket include all of the parts required to complete a quick and efficient repair : bearings, seals, nuts, shields... etc

### REAR SUSPENSION KITS

The rear suspension kit consists of a strut insulator which absorbs vibrations and ensures the efficiency and safety of the suspension.

These kits do not include a bearing and are easy to remove (no special tools). Changing is easy since it is removed at the same time as the shock absorber. SNR recommends that the kit should be replaced at the same time as the shock absorber.

### EVOLUTION OF THE MC PHERSON STRUT SUSPENSION BEARING

The Mc Pherson strut suspension system is today fitted on a large number of vehicles. SNR has been developing its range to meet market demands with thrust bearings that incorporate more functions : e.g. support for the spring and seating for the shock absorber.

> **Generation 0**  
Suspension bearing in steel located on the shock absorber shaft

> **Generation 1**  
Suspension bearing in steel located against the upper or lower spring support

> **Generation 2**  
Suspension bearing incorporating the upper spring support

> **Generation 2.5**  
Suspension bearing incorporating the upper spring support and the seating for the shock absorber.

The suspension plays an important role in the vehicle safety. The components have to function in extreme operating conditions ; vibrations, water spray, salt, stones and sand...

It is therefore essential to detect failures and to learn from them in order to continue improving product capability and meet the motorists' needs.

## SUSPENSION THRUST BEARINGS

FAILURE	PROBLABLE CAUSE	RESULT
Corrosion on rolling element raceway	Entry/pollution: water, salt, sand...	Noisy on bad roads or when maouvering Increased steering effort
Destruction of a raceway	Driving condidtions are difficult, accident	Noisy on bad roads or when maouvering Increased steering effort
False Brinell effect	Micro-vibrations	Noise from road springs inside the vehicle

## INSULATORS

FAILURE	PROBLABLE CAUSE	RESULT
Torn strut insulator	Difficult driving condidtions	Play in the front suspension and reduced efficiency
Change in material: Hardening or softening of the rubber	Very high or very low temperature Chemical pollution	Lifespan of the component and driver comfort reduced
Deterioraton of material	Entry/pollution: water salt, sand...	Reduction in lifespan
