## WHAT IS AN HDS REFERENCE ?

The HDS range includes wheel hub units as well as kits with several bearings and small components.

HDS are wheel bearings with a special design dedicated to a specific application and manufacturer brand.

## CARACTERISTICS

- Optimal performance and easy to assemble
- Special design linked to a specific application
- 2 bearings integrated in a support or constituting a kit with small components (screw, nut, seal)

All our wheel hub units and HDS bearings are of OE quality with a special focus on heat treatment, which greatly increases the durability and life of our products.

## DID YOU KNOW ?

A truck stopped on the side of the road can cost several tens of thousands of euros: breakdown service, repairs, immobilization of the vehicle and the transported goods

If we add up all the costs (purchase, maintenance, personnel, repair...), the average cost of a truck is between 100 000 € and 150 000 € per year. Maintenance - including hub maintenance - represents 6 to 8% of this annual cost.

**NTN-SNR's HDS bearings offer exclusively OE quality products based on the manufacturer's requirements. As a result, the annual maintenance cost is reduced for transporters and the breakdowns / downtime of heavy goods vehicles are greatly reduced.**

# **HDS NTN-SNR OFFER**

NTN-SNR currently offers 35 HDS references covering the vehicles most commonly used in Europe (front and rear hubs).
