## IDENTIFICATION OF SUSPENSION BEARING KIT KB950.00

### COMMON PROBLEMS: THE RUBBER ISOLATOR BUSH SEPERATING FROM THE METAL SUPPORT

#### Probable cause:

**Incorrect assembly of the kits components.**

This failure is common when the shock absorber strut sub assembly is not correctly assembled ie, parts fitted the wrong way around or totally missed out.

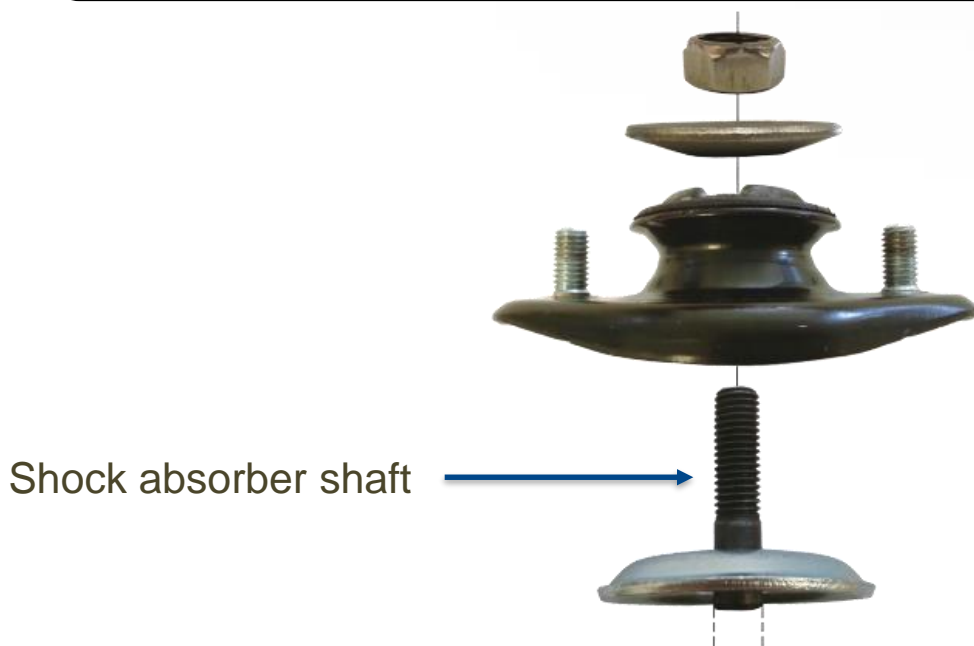

### RECOMMENDATIONS

- When replacing the insulator, make sure the two mounting cups (upper and lower) are retained as they are needed to reassemble the strut top mounting.
- Make sure the cups and reinstalled the correct way around.

# KIT INSTALLATION INSTRUCTIONS

Do not change the installation orientation of the upper mounting cup (dished upwards)  
Do not forget to re-install the lower mounting cup in its correct installation orientation (dished downwards).

## Recommendations

Follow the manufacturers' installation procedures and apply the tightening torques specified by the manufacturer.
