

“A DATE WITH THE AFTERMARKET” SNR ENGINE RANGE SPECIAL

The SNR web series continues this time with three new videos dedicated to the SNR engine range. NTN and SNR are global leaders in the automotive industry. Today the SNR range covers 98% of passenger vehicles registered in Europe. Thanks to the 3,000 plus part numbers that make up the SNR POWERTRAIN range.

This autumn, SNR puts its engine range center stage with three new videos covering the engine range. Anaïs, our POWERTRAIN Product Manager, says “these videos give viewers the opportunity to discover the quality of our extensive product range featuring high quality timing and accessory belt kits”. Each year SNR produces more than 10 million rollers and 40 million roller bearings.

To maintain the vehicles engine performance SNR applies its major industrial resources to cutting edge technology, in all its test centers our products are rigorously tested. Quentin, one of our POWERTRAIN Application Engineer, will focus particularly on the demanding specifications expected by SNR. *“On our test benches, we conduct endurance validation tests at different speeds and temperatures. The damping and torque of the tensioner rollers are subject to strict quality controls We also meticulously check the functional dimensions to make sure they 100% comply. Product quality and performance are our core concerns,”* explains Quentin.

And finally, the SNR team will meet Mathieu DESSIMOULIE, Product Manager for CLAS tools, Mathieu is an expert in technical equipment and tooling solutions. He will share his know-how on best practices and the correct tools required for a successful replacement of an engine timing belt system.

When changing a timing belt system there are many pitfalls to be avoided, making sure you replace all of the timing belt components is just one! SNR timing belt kits make this process fast and easy. Anaïs says “you can be sure you have replaced the corrected components when using an SNR kit”

Released at weekly intervals starting from mid-September, the 3 videos will be available in 9 languages on NTN SNR’s social media page and the [NTN-SNR YouTube](#) channel.
