

PRESS RELEASE - 29/09/2025

NTN Europe unveils its new range of SUPERKITS: a comprehensive and optimal solution for vehicle suspension

NTN Europe, a key player in the automotive aftermarket and an expert in suspension systems, is proud to announce the launch of its brand new range of SNR SUPERKITS. Born from the manufacturer's renowned expertise, its SUPERKITS are the ideal solution for repair professionals. Complete and ready to use, they guarantee quick installation while ensuring optimal performance for the vehicle, thanks in particular to perfect synergy and unrivalled consistency between parts.

A strategic partnership at the heart of SUPERKIT development

To consolidate the success of its range of shock absorbers launched in 2023, NTN Europe took a major strategic step by acquiring a 35% stake in LTM. Finalised on 20 May 2025, this investment formalised a long-standing collaboration and positioned NTN Europe as a key player in the aftermarket shock absorber market.

This partnership is based on a unique synergy: LTM's technical expertise in shock absorbers on the one hand and NTN Europe's expertise as a world leader in suspension systems on the other. It is from this impressive pooling of skills, guaranteeing high-quality production that perfectly meets manufacturers' requirements, that the new range of SNR SUPERKITS was conceived.

A range designed for performance and reliability

Each SUPERKIT consists of a shock absorber and a suspension kit, two components that are essential for vehicle safety. Because a shock absorber can only achieve its full effectiveness with a suitable suspension kit, this complete solution ensures increased durability, optimised driving comfort and a significant reduction in noise, vibration and tyre wear.

NTN Europe's total control of the production chain, from part design to quality control, enables it to guarantee optimal performance and reliability in line with automotive manufacturers' standards. The parts are tested and validated by experts to ensure their long-term strength and reliability.

"The launch of these kits marks a major advance for the automotive aftermarket. Our SNR SUPERKITS represent a unique offering that promotes complete, high-quality repairs to professionals," says Jonathan MORENO, Manager of the Shock Absorbers at NTN Europe.

Time savings and simplified logistics for professionals

This innovative concept also offers unprecedented time savings and efficiency. Designed to meet the needs of repairers and distributors, each kit, with its unique code, simplifies logistics and daily operations. By eliminating the need to search for and order individual parts, these new references enable:

- Complete and error-free repairs
- Easier management
- Optimisation of storage space

The SNR SUPERKITS range, comprising 30 part numbers at its launch this autumn (18 front and 12 rear part numbers), covers applications for the leading European brands as well as certain Japanese models,

including Nissan.

With this launch, NTN Europe is positioning itself as a key player in innovation in the automotive aftermarket sector, offering an integrated solution that directly meets the performance, efficiency and profitability needs of professionals.

For more information on this new range of SUPERKITS, download the [brochure](#).

About NTN Europe

NTN Europe designs, develops and manufactures high-precision bearings and solutions for movement in all industrial, automotive and aerospace markets. As part of the Japanese NTN Corporation group, NTN Europe has an R&D centre and 14 production sites in Europe. It employs more than 5,000 people and has an annual turnover of €1.2 billion in 2024. NTN Europe applies the Group's philosophy of "Make the world Nameraka": contributing to a more fluid, mobile and harmonious society. It reflects the expertise, leadership and vision for the future of the NTN Group.
