### **A NEW 2016 WHEEL CATALOGUE FROM NTN-SNR**

**NTN-SNR has just released the new 2016 edition of its wheel catalogue for the IAM. Entirely dedicated to wheel bearings and kits, this 880-page catalogue features a large amount of new part numbers.**

**Now offering a complete range of single wheel bearings and wheel bearing kits comprising some 1800 part numbers in original equipment quality, NTN-SNR is strengthening its position as a premium supplier for distribution and repair professionals.**

With its precise table of contents, clearly organised layout, and systematic use of product photos, this new 2016 wheel catalogue is more practical and effective than ever – a genuine tool of the trade.

Several chapters are specifically dedicated to different product families: wheel bearing kits, brake disc hub kits, and single bearings.

These chapters are organised around three criteria which enable users to find any part rapidly:

- Classification by vehicle reference
- Classification by NTN-SNR part number with one photo per product
- OE cross-reference list.

Moreover, a series of symbols and pictograms is associated with each part number, thereby eliminating any risk of error by helping the user to identify the right product at first glance. Technical details are listed for each part number.

The bearing dimensions are indicated (outer and inner diameters, thickness), for example, along with the tightening torques.

And finally, in order to enhance the quality of service to its customers, NTN-SNR promotes a range of special tools developed in partnership with the German toolmaker HAZET.

A catalogue 2.0 connected to the smartphone application TechScan'R

Presented at the last Equip-Auto show, TechScaN'R is an innovative new application for smartphones and tablets. It provides access to technical information that is necessary for distributors and mechanics.

TechScaN'R is an application that "connects" the NTN-SNR packaging and paper catalogues. Scanning the part number, either directly on the box or in the catalogue, currently provides the user with 45 different kinds of information:

- Dimensions, weight, number of components in the kits
- HD photos of products and components
- Installation instructions, package leaflets, technical diagrams, etc.
- PDF files related to the part numbers, with TechInfo bulletins, etc.

With TechScaN'R, the paper catalogue becomes interactive.

We would also like to remind you that, in order to meet the strong international demand, this 2016 edition is available in 9 languages and can also be browsed on the NTN-SNR website.
