

**NTN-SNR extends its lubrication range designed for the single-point lubrication system  
Ready Booster**

## **NTN-SNR launches Food Chain Oil, a new oil developed for the food-processing and pharmaceutical industries**

NTN-SNR launches Food Chain Oil, its new food-grade oil designed specifically to meet demand from the food-processing and pharmaceutical industries. Food Chain Oil is intended for use with NTN-SNR's single-point lubrication system Ready Booster and is compliant with the NSF-H1 food industry standard. Food Chain Oil extends NTN-SNR's range of lubricants designed specifically to meet the food industry's strict requirements and is now available from distributors throughout Europe. The launch of another technical food-grade grease designed for use in very high-temperature bearings applications is also scheduled for June. Food Chain Oil extends the range offered by NTN-SNR's Ready Booster single-point lubrication system, which has become a best-seller since its launch 3 years ago and is particularly suitable for the food-processing and pharmaceutical industries. NTN-SNR's extensive range of lubricants is fully in line with its strategy of developing services, with its Experts&Tools department, guaranteeing its clients the longest possible service life for their bearings and facilities, and cutting their operating costs.

### **A high-performance food-grade oil**

With its Food Chain Oil compliant with standard NSF-H1, NTN-SNR offers an oil that fully meets the lubrication requirements of lifting, drive and transmission chains in the food-processing and pharmaceutical industries. It can also be used for straight, bevel and worm gearing, main bearings, pivots and articulations. Food Chain Oil is effective through wide temperature ranges (-30° C to 120° C). It offers very high resistance to oxidation, ensuring optimal protection despite the high-pressure cleaning operations performed on machinery. Furthermore, it remains neutral in relation to sealants, which thus retain all their performance.

## An ideal lubrication system

Food Chain Oil has been specially designed for use in NTN-SNR's Ready Booster single-point lubrication system. This oiler's key feature is that it is particularly suited to harsh environments. Thanks to its excellent sealing capacity (IP68), it can be used in industrial applications that use large amounts of water. Its corrosion resistance is a key benefit in very demanding industrial environments in terms of cleanliness and hygiene, such as the food-processing and pharmaceutical industries.

\*\*\*

*NTN-SNR ROULEMENTS, headquartered in Annecy (Haute-Savoie, France), belongs to the Japanese group NTN Corporation, one of the world leaders in bearings. NTN-SNR ensures the management and development of all NTN activities for the EMEA region and Brazil. A major player as a designer, developer and manufacturer of bearings and sub-assemblies for automotive, industry and aeronautics, NTN-SNR offers a comprehensive range by also developing maintenance services and solutions. NTN-SNR employs 4,225 people at 9 production sites, including 6 in France, as well as 18 business representations.*
